(72) Inventor ANDRÉ MIEVILLE

## (54) SUBSTITUTED PHENOXY-ALKYL-CARBOXYLIC ACIDS AND DERIVATIVES THEREOF

(71) We, ORCHIMED S.A., a Swiss Body corporate of c/o Me. Gumy, 8 Bd. de Perolles, 1700 Fribourg, Switzerland, do hereby declare the invention, for which we pray that a patent may be granted to us, and the method by which it is to be performed, to be substantially described in and by the following statement:—

This invention concerns p-carbonyl-phenoxy-carboxylic acids and derivatives thereof which result from transforming the p-oxo radical into oxime, acid, ester and amide radicals and from transforming the carboxylic acid radical into ester and amide radicals.

Our copending Patent Application Number 3085/70 (1 268 321) claims compounds having the formula

where Y is —OH, —OCH<sub>3</sub>, —OC<sub>2</sub>H<sub>5</sub>, —OC<sub>3</sub>H<sub>7</sub>, NHOH, NR<sub>1</sub>R<sub>2</sub>, A represents a single bond or a divalent straight- or branched-chain C<sub>1-3</sub> hydrocarbon radical, R' is a hydrogen atom or a phenyl group, and either X is = O or = NOH and R is a hydrogen atom or a phenyl, halophenyl, C<sub>1-3</sub> alkyl, C<sub>1-3</sub> ω-haloalkyl, and if X = O, R is hydroxyl, methoxy, ethoxy, propoxy, —NHOH or —NR<sub>1</sub>R<sub>2</sub> group or R—CX represents a cyano group, each of R<sub>1</sub> and R<sub>2</sub> being a hydrogen atom or an alkyl or diethylamino alkyl group or R<sub>1</sub> and R<sub>2</sub> forming, together with the nitrogen atom to which they are attached, a substituted or unsubstituted heterocyclic group.

The present invention provides compounds having the general formula

but excluding those claimed in the said copending application, in which R' and R'' are identical or different and each represents H, CH<sub>3</sub>, C<sub>2</sub>H<sub>5</sub>, C<sub>6</sub>H<sub>5</sub>, p—F—C<sub>6</sub>H<sub>4</sub>, p—Cl—C<sub>6</sub>H<sub>4</sub>, —R''' and R''', which may be identical or different, represent H, a halogen atom, preferably F, Cl or Br, a C<sub>1-3</sub> alkyl group, CF<sub>3</sub>, SCH<sub>3</sub>, SOCH<sub>3</sub>, SO<sub>2</sub>CH<sub>3</sub>, OCH<sub>3</sub>, OH or C<sub>6</sub>H<sub>5</sub>; R<sup>VI</sup> represents H, a C<sub>1-3</sub> alkyl group, an aryl group, an aryl group the aromatic residue of which is substituted by one or more CH<sub>3</sub>, CF<sub>3</sub> or halogen atoms, a cycloalkyl group, OH, a C<sub>1-4</sub> alkoxy group, an aryloxy

group, an aryloxy group the aromatic residue of which is substituted, a cycloalkyloxy group, a  $\text{NR}_3\text{R}_4$  group, a  $\text{NHCH}_2\text{CH}_2\text{NR}_3\text{R}_4$  group or an O-alkylene- $\text{NR}_3\text{R}_4$  group;  $\text{Y}'$  represents  $\text{OH}$ ,  $\text{C}_{1-4}$  alkoxy,  $\text{NR}_3\text{R}_4$ ,  $\text{NHCH}_2\text{CH}_2\text{NR}_3\text{R}_4$  or O-alkylene- $\text{NR}_3\text{R}_4$ ;  $\text{X}'$  represents  $\text{O}$  or  $\text{NOR}_6$ ;  $\text{R}_6$  represents  $\text{H}$ ,  $\text{C}_{1-5}$  alkyl,  $\text{CH}_2\text{CH}_2\text{NR}_3\text{R}_4$  or  $\text{CH}_2\text{CHOHCH}_2\text{OH}$ ; and each of  $\text{R}_3$  and  $\text{R}_4$ , which may be identical or different, represents a hydrogen atom, a  $\text{C}_{1-5}$  alkyl group, a  $\text{C}_{3-7}$  cycloalkyl group, preferably a  $\text{C}_{5-6}$  cycloalkyl group, an aryl group, an aryl group the aromatic residue of which is substituted by one or more halogen atoms or  $\text{CF}_3$  or  $\text{CH}_3$  groups, or  $\text{R}_3$  and  $\text{R}_4$  are joined to form, together with the nitrogen atom to which they are bonded, an optionally substituted 5- to 7-membered heterocyclic ring, which may contain a second heteroatom selected from  $\text{O}$ ,  $\text{S}$  and  $\text{N}$ , or radical of formula  $-\text{NH}(\text{CH}_2)_4\text{CH}(\text{NH}_2)\text{COOH}$  or  $-\text{NHCH}(\text{COOH})\text{CH}_2\text{SH}$ , with the provisos that if  $\text{R}''$  and  $\text{R}'''$  are not both hydrogen, then  $\text{R}''$  is methyl or *p*-chlorophenyl, and that if  $\text{Y}$  is hydroxy or alkoxy,  $\text{R}''$  is hydrogen or  $\text{C}_{1-5}$  alkyl and one of  $\text{R}''$  and  $\text{R}'''$  is hydrogen, the other of  $\text{R}''$  and  $\text{R}'''$  is methyl or ethyl.

This invention also concerns the acid-addition salts which can be formed from formula I compounds.

Compounds of formula I can be used as therapeutic agents, and act in particular on the central nervous system, or as anti-inflammatory or normolipemiant agents. Such compounds can be used in therapeutic medicines as analgesic, anti-inflammatory, psychotropic, cardiovascular, normolipemiant, hypocholesterolemiant or antitussive ingredients.

Consequently, the invention further provides a therapeutic composition containing at least one compound of the invention as an active ingredient in association with a pharmaceutically acceptable carrier, diluent or coating.

The term alkyl here means a straight or branched hydrocarbon chain. The term alkoxy means a straight or branched hydrocarbon chain which is bonded to an oxygen atom by a single bond. Among the alkoxy groups according to this invention, the following simplest ones can be mentioned: methoxy, ethoxy, propyloxy, isopropyloxy, butyloxy, isobutyloxy and *tert*-butyloxy.

The preferred cycloalkyl groups are cyclopentyl, cyclohexyl and  $\Delta^{1,2}$ -cyclohexenyl. The preferred cycloalkyloxy groups are cyclopentyloxy, cyclohexyloxy and  $\Delta^{1,2}$ -cyclohexenyloxy.

The term "O-alkylene- $\text{NR}_3\text{R}_4$ " which is also described as "aminoalkyloxy", represents a group consisting of a divalent straight or branched hydrocarbon chain which is between an oxygen atom and a  $\text{NR}_3\text{R}_4$  group. Preferably the alkylene residue comprises from 1 to 6 carbon atoms. Among the preferred O-alkylene- $\text{NR}_3\text{R}_4$  groups the following ones can be mentioned: aminoethoxy, aminopropyloxy, aminoisopropyloxy, mono- and dialkylaminoethoxy, mono- and dialkylaminopropyloxy, mono- and dialkylaminoisopropyloxy, piperidinoethoxy, azepinoethoxy, morpholinoethoxy, piperazinoethoxy, *N'*-methylpiperazinoethoxy, pyrrolidinoethoxy, piperidinopropyloxy, piperidinoisopropyloxy, azepinopropyloxy, azepinoisopropyloxy, piperazinopropyloxy, piperazinoisopropyloxy, morpholinopropyloxy, morpholinoisopropyloxy, thiomorpholinopropyloxy, thiomorpholinoisopropyloxy, *N'*-*p*-chlorophenylpiperazinopropyloxy and *N'*-*p*-chlorophenylpiperazinoisopropyloxy.

Examples of groups represented by  $\text{NR}_3\text{R}_4$  are amino, mono- and dialkylamino, morpholino, thiomorpholino, pyrrolidino, piperidino, azepino, *N*-*p*-chlorophenylpiperazino, *N*-methylpiperazino, piperazino, 4-methylpiperidino, anilino, *N*-methylanilino, 2,3-dimethyl anilino, *p*-chloranilino, O-trifluoromethylanilino, *p*-trifluoromethyl anilino, cyclohexylamino and cyclopentylamino groups and analogues thereof.

The preferred halogen atoms are fluorine, chlorine and bromine.

The aryl group of  $\text{R}''$ ,  $\text{R}'''$ ,  $\text{R}_3$  and  $\text{R}_4$  can be substituted by one or more  $\text{F}$ ,  $\text{Cl}$ ,  $\text{Br}$ ,  $\text{CF}_3$  and  $\text{CH}_3$ . The preferred ones according to this invention are phenyl, *p*-chlorophenyl and *p*-fluorophenyl.

Among the compounds corresponding to formula I two kinds of products can be distinguished:

1) the *p*-carbonyl-phenoxy-alkyl-carboxylic acids and derivatives thereof which result

- from transforming the *p*-oxo group into oxime  $\text{X} = \text{NOR}_6$ ,
- from transforming the carboxylic acid group into ester and amide groups, and,
- from transforming both the *p*-oxo group into oxime and the carboxylic acid groups into ester and amide groups; and,

2) the *p*-carboxy-phenoxy-alkyl-carboxylic acids, hereafter called "diacids" and derivatives thereof which result from the transformation of one or the both carboxylic acid groups into ester and amide groups.

Among the compounds of the "*p*-carbonyl" type,  $R^{\text{vi}}$  represents H,  $C_1-C_6$  alkyl, aryl preferably  $C_6H_5$ ,  $p\text{-Cl-C}_6H_4$  and  $p\text{-F-C}_6H_4$ .

Among the "diacid" type  $R^{\text{vi}}$  represents OH,  $C_1-C_6$  alkoxy, aryloxy preferably phenoxy and *p*-chlorophenoxy, cycloalkyloxy preferably cyclopentyloxy, cyclohexyloxy,  $\Delta^{1,2}$ -cyclohexenyloxy,  $NR_3R_4$ ,  $NHCH_2CH_2NR_3R_4$ , or O-alkylene- $NR_3R_4$ .

The *para*-carbonyl compounds of formula I in which  $X'$  is an oxygen atom and  $Y'$  is a hydroxy group or a  $C_{1-3}$  alkoxy group may be prepared by reacting a *para*-hydroxybenzoyl compound of the formula

in which  $R^{\text{vi}}$ ,  $R^{\text{'''}}$  and  $R^{\text{'''}}$  are defined as above with a halogen compound of the formula

in which Hal represents a halogen atom,  $Y''$  is a hydroxy group or a  $C_{1-3}$  alkoxy group and  $R'$  and  $R''$  are as defined above, in an alkaline medium.

The carbonyl function  $>C=O$  may be converted into an oxime function or an ester or other ester or an amide function respectively, using a method known *per-se* for converting a carbonyl function to an oxime function or for converting a carboxylic or  $C_{1-3}$  alkoxy ester function to an ester, other ester or amide function.

The following procedures may be used to prepare the compounds of formula I:

#### PROCEDURE A.

Preparation of acids, esters and amides of formula I, in which  $R''$  is a hydrogen atom and  $X'$  is an oxygen atom

a) A *p*-hydroxybenzoyl derivative having the formula

in which  $R_s$  is a hydrogen atom or an alkyl or aryl group, particularly a *p*-chlorophenyl group, is reacted with an  $\alpha$ -halogenated acid for the formula

(IIIa)

or an  $\alpha$ -halogenated ester of the formula

(IIIb)

in order to obtain respectively a compound of the formula

b) When  $R_s$  represents a hydrogen atom or an alkyl group, compound IVa may be esterefied using methyl or ethyl alcohol; the ester obtained may be condensed with an appropriate amine to produce a desired amide of formula I, or transesterified to synthesize an ester of formula I other than those already mentioned in procedures A (a) and A (b).

c) When  $R_s$  represents an aryl radical, compound IVa may be converted by means of  $\text{SOCl}_2$  or  $\text{PCl}_5$  into the corresponding acid chloride which may be reacted with an appropriate amine, alcohol or amino alcohol, in accordance with a method known *per se*, in order to obtain respectively a desired amide, ester or amino ester of formula I.

d) Compound IVb may be condensed with an appropriate amine in accordance with a method known *per se* to produce a desired amide of formula I or compound IVb may be transesterified to prepare other esters of formula I.

#### PROCEDURE A.

Preparation of acids, esters and amides of formula I in which  $R' = R'' = \text{CH}_3$ , and  $X' = \text{O}$

a) An acetone-chloroform mixture or an  $\alpha$ -halogenated ester of the formula  $\text{Br}-\text{C}(\text{CH}_3)_2-\text{CO}_2\text{Et}$  (V), is reacted with compound IIa in an alkaline medium, in order to obtain respectively a compound of the formula

b) Compound VIa can be esterified by means of a lower alcohol, for instance to give methyl, ethyl or iso-propyl ester, particularly when  $R_s$  is an alkyl group.

c) Ester VIb can be amidified or transesterified, in accordance with methods known *per se* to produce respectively an amide or other ester of the formula I.

d) When  $R_s$  is an aryl group, compound VIa may be converted into the corresponding acid chloride by means of  $\text{SOCl}_2$  or  $\text{PCl}_5$  and then, if desired, the acid chloride may be reacted with an appropriate amine, alcohol or amino-alcohol to produce an amide, ester or amino ester respectively of the formula I.

#### PROCEDURE B.

Preparation of aldoximes and ketoximes of formula I, i.e. compounds of formula I in which  $X' = \text{NOH}$  or  $\text{NOR}_0$ .

a) The compounds of formula I in which  $X' = \text{NOH}$  may be prepared by treating corresponding compounds of the formula I in which  $X' = \text{O}$  with hydroxylamine hydrochloride in a basic medium, preferably a pyridinic medium.

b) The compounds of the formula I in which  $X' = \text{NOR}_0$  may be prepared:— by condensing corresponding compounds of the formula I in which  $X' = \text{O}$  in a basic (pyridine) medium, with a substituted hydroxylamine hydrochloride, such as:

from the compound of the formula I, in which  $X' = \text{NOH}$ , by the following reactions:

The following examples are given to illustrate the invention and analogous methods of preparing compounds in accordance with the invention.

## EXAMPLE 1.

4-(*p*-chlorobenzoyl)-phenoxy-acetic acid

## a) Preparation of 4-hydroxy-4'-chlorobenzophenone

Phenol and *p*-chlorobenzoyl chloride are successively added at 0°C to a solution of AlCl<sub>3</sub> in nitrobenzene (or a suspension of AlCl<sub>3</sub> in ligroine or dichloroethylene); the resulting mixture is kept warm to 25°C for 17 hours, and hydrolysed; 4-hydroxy-4'-chlorobenzophenone is then isolated by extraction using dilute sodium hydroxide and washing with hexane.

b) 4-(*p*-chlorobenzoyl)-phenoxyacetic acid

A mixture of 1 mole of 4-hydroxy-4'-chlorobenzophenone, 2.2 moles of NaOH, 1.2 moles of ClCH<sub>2</sub>-CO<sub>2</sub>H and 1300 cc of water, is refluxed for 7 hours.

After acidification and extraction with NaHCO<sub>3</sub> have been conducted and followed by a second acidification, 4-(*p*-chlorobenzoyl)-phenoxyacetic acid is isolated. Its melting point is 152°C.

## EXAMPLE 2.

N-(*p*-propionyl-phenoxyacetyl)-morpholine.

This example illustrates the procedures A(b) and A(d) described above.

a) Methyl *p*-propionyl-phenoxyacetate

1 mole of *p*-propionyl-phenoxyacetic acid is refluxed during 10 hours, with 100 cc of MeOH and 300 cc of CHCl<sub>3</sub> or CH<sub>2</sub>Cl<sub>2</sub> in the presence of sulfuric acid. The resulting mixture is poured into water. The desired ester remains in the organic phase. It is washed once with dilute NaOH, then twice with water. Pure methyl *p*-propionyl-phenoxyacetate is thus isolated, with a yield of about 90%. MP: 59°C.

b)

1 mole of the ester obtained in step (a) is refluxed for 8 hours with 2.5 moles of morpholine. Then, 1 volume of water is added, and the product is left to crystallize in the cold state. The morpholinic amide is filtered off and recrystallized from alcohol (yield: 85%; melting point: 88°C).

By using the procedure described in example 2, original compounds listed in table III are prepared.

## EXAMPLE 3.

N-(*p*-benzoylphenoxyacetyl)-piperidine

This example illustrates procedure A (c) described above

The piperidinoamide of *p*-benzoylphenoxy acetic acid is obtained by treating 1 mole of *p*-benzoylphenoxy acetic acid chloride with 2 moles of piperidine in benzene.

By using the procedure described in example 3, original compounds listed in table IV are obtained.

## EXAMPLE 4.

## Para-propionhydroximoyl- phenoxy-acetyl-1-piperidine

1 mole of *p*-propionylphenoxyacetyl-1-piperidine is refluxed for 5 hours with 1.1 mole of NH<sub>2</sub>OH.HCl and 1.05 mole of pyridine. The desired oxime is precipitated in water and recrystallized from alcohol. Its melting point is 144°C.

By using the procedure described in example 4, original compounds listed in table V are obtained.

## EXAMPLE 5.

## Preparation of para-(4-chlorobenzoyl)-phenoxy-isobutyric acid

1 mole of 4-hydroxy-4'-chlorobenzophenone is dissolved in anhydrous acetone and then 5 moles of powdered sodium hydroxide is added. The corresponding sodium phenate precipitates. Refluxing is effected, and then, 1,5 mole of  $\text{CHCl}_3$ , diluted with anhydrous acetone is added and the resulting mixture is refluxed for 10 hours. After cooling, water is added, the acetone is evaporated, the aqueous phase is washed with ether and acidified and the organic phase is re-dissolved in ether and extracted into a solution of bicarbonate. The bicarbonate solution is then acidified to obtain the desired acid, having a melting point of  $185^\circ\text{C}$ , with a yield of 75%.

By using the procedure described in example 5, original compounds listed in table VI are prepared.

Esters and amides of the phenoxy-isobutyric acids prepared in accordance with the procedure of example 5 are produced in accordance with procedure A<sub>1</sub> described above. Esters and amides prepared in this manner are listed in table VII.

The compounds listed in table VII can be prepared in a manner similar to that described in the following example.

## EXAMPLE 6.

## Iso-propyl p-(4-chlorobenzoyl)-phenoxy-isobutyrate

(Code No. 178)

1 mole of the acid obtained in example 6 is converted into its acid chloride using thionyl chloride (2,5 moles). 1 mole of the acid chloride is then condensed with 1,05 mole of isopropyl alcohol in the presence of 0,98 mole of pyridine in an inert solvent such as benzene.

Since traces of  $\text{SO}_2$  (which has a bad smell) may be obtained from the thionyl chloride; it is preferable to avoid this disadvantage by carrying out the esterification directly.

Using procedure B described above, isobutyric acids, and esters and amides thereof prepared in example 5 are connected to the corresponding oxime compounds listed in table VIII.

The compounds of formula I in which  $\text{R}^{\text{vi}}$  and  $\text{Y}'$  are both hydroxy groups may be prepared in accordance with the invention by a) reacting *p*-hydroxybenzoic acid which has the formula

with a halogeno carboxylic acid having the formula

in which Hal represents a halogen atom in an aqueous alkaline medium under reflux, and b) precipitating the resulting diacid in an acidic medium.

It is preferred to use one mole of *p*-hydroxy benzoic acid per mole of the halogeno carboxylic acid.

The compounds of formula I in which at least one of  $\text{R}^{\text{vi}}$  and  $\text{Y}'$  is other than hydroxyl can be prepared in accordance with the invention by converting at least one of the acid functions of the diacid into an ester or amide function by a method known *per-se* for converting carboxylic acid groups to ester or amide groups.

The diacid, which has the formula

can be used directly:

- 5 a) for the synthesis of a diester of the invention in which  $R^VI = Y'$ ,  
 b) to prepare an intermediary acid dichloride for which a diester or a diamide of  
 the invention in which  $R^VI = Y'$  can be synthesized, or  
 c) for the synthesis of a monoester of the invention; in this case the acid function  
 carried by the oxyacetic chain, i.e. the group  $OCR^VR''COOH$ , is esterified through the  
 acid monochloride prepared with  $PCl_5$  in  $C_6H_6$  at  $0^\circ C$ .

10 The monoesters of the formula

can be synthesized in accordance with method c) or else by the action of ethyl bromo-  
 acetate:

15 on a *para*-carboxy-hydroxyphenone of the formula

in a heterogenous alkaline medium.

20 From the monoesters of the invention, particularly those of formula VIII above,  
 there can be obtained, by using a method known *per-se*, monoamides of the invention,  
 e.g. of the formula

or acid monochlorides, e.g. of the formula

25 The acid monochlorides can in turn be converted into symmetrical and asymmetrical  
 diesters and amide-esters of the invention, e.g. of the formula

Finally, a symmetrical or asymmetrical diester of the invention, e.g. of the formula

can be converted to an amide ester of the invention, e.g. of the formula

5 By a simple modification of the reaction sequences described above it is possible to  
 10 obtain the compounds of the invention in which one of R<sup>VI</sup> CO— and —COY' is an  
 amino-ester group and the other of R<sup>VI</sup> CO— and —COY is an amide group, any  
 substituents on the nitrogen atom of the amino-ester group being identical to or  
 different from those on the nitrogen atom of the amide group. This is illustrated in the  
 following reaction scheme in which

represent non-identical amino groups.

The following examples are given to illustrate the invention.

15

**EXAMPLE 8.**  
**N-(p-carboxyphenoxy-acetyl)piperidine**

15

20

A mixture of 1 mole of ethyl *p*-carboxy-phenoxy-acetate and 2.5 moles of piperidine is refluxed for 7 hours. Water is then added, and 1-*p*-carboxy-phenoxy-acetyl piperidine precipitates.

20

## EXAMPLE 9.

Ethyl para-piperidinocarbonyl-phenoxy-acetate

Operation is in accordance with the following reaction scheme:

The amide ester product can be reacted with any amine, in accordance with the procedure described in Example 8, to produce a diamide.

The substances indicated in Tables I and II are prepared in accordance with the procedure described in Example 8 or Example 9.

The substances listed in Table I bis have been found to possess anti-tussive and analgesic properties.

The following Examples illustrate particular procedures for preparing the compounds number 96 and 99 appearing in Tables I and II respectively.

## EXAMPLE 10.

N-(p-carboxyphenoxy-acetyl)-piperidine  
coded as No. 96

## a) Ethyl p-carboxyphenoxy-acetate

1 mole of ethyl bromoacetate is reacted with 1 mole of p-hydroxybenzoic acid in the presence of 2 moles of K<sub>2</sub>CO<sub>3</sub> in acetone, methyl-ethylketone, dioxan or tetrahydrofuran, for 48 hours, at the reflux temperature of the organic solvent to obtain ethyl p-carboxyphenoxy-acetate.

## b) N-(p-carboxy-phenoxy-acetyl)piperidine

The preceding ester (1 mole) is heated under reflux with piperidine (3 moles) in a chlorinated solvent, for 6 hours. Water is added to precipitate N-(p-carboxyphenoxy-acetyl)piperidine after condensation is complete.

## EXAMPLE 11.

N-(p-ethoxycarbonyl-phenoxy-acetyl)piperidine  
coded as No. 99

Ethyl p-carboxy-phenoxy-acetate is esterified in ethanol and chloroform in the presence of sulphuric acid. N-(p-ethoxycarbonyl-phenoxy-acetyl)piperidine is obtained by condensation of 1 mole of the resulting diester (ethyl p-ethoxycarbonyl-phenoxy-acetate) with 3 moles of piperidine in an inert solvent for 7 hours at the boiling temperature of said solvent.

We make no claim to the compounds claimed in the specification of our prior co-pending Application No. 3085/70 (1,268,321), which are defined at the beginning of the specification. Subject to this disclaimer,

WHAT WE CLAIM IS:—

1. A phenoxy-alkyl-carboxylic compound of the general formula:

in which each of  $R''$  and  $R'$ , which may be identical or different, is a hydrogen atom or a methyl, ethyl, phenyl, *p*-chlorophenyl or *p*-fluorophenyl group; each of  $R'''$  and  $R''''$ , which may be identical or different, is a hydrogen or halogen atom or a  $C_{1-3}$  alkyl,  $CF_3$ ,  $SCH_3$ ,  $SOCH_3$ ,  $SO_2CH_3$ ,  $OCH_3$ ,  $OH$ ,  $C_6H_5$  or substituted phenyl group;  $R''$  is a hydrogen atom, a  $C_{1-3}$  alkyl group, an aryl group optionally containing one or more nuclear substituents selected from methyl and trifluoromethyl groups and halogen atoms, a cycloalkyl, hydroxyl or  $C_{1-4}$  alkoxy group, an aryloxy group optionally containing one or more nuclear substituents, or a cycloalkoxy, cycloalkenyloxy,  $NR_3R_4$ ,  $NHCH_2CH_2NR_3R_4$  or  $O$ -alkylene- $NR_3R_4$  group;  $Y'$  is a hydroxy,  $C_{1-4}$  alkoxy,  $NR_3R_4$ ,  $NHCH_2CH_2NR_3R_4$  or  $O$ -alkylene- $NR_3R_4$  group;  $X'$  represents  $O$  or  $NOR_5$ ;  $R_5$  is a hydrogen atom or a  $C_{1-3}$  alkyl,  $CH_2CHOHCH_2OH$  group; and each of  $R_3$  and  $R_4$ , which may be identical or different, is a hydrogen atom, a  $C_{1-3}$  alkyl or  $C_{3-7}$  cycloalkyl group or an aryl group optionally containing one or more nuclear substituents selected from halogen atoms and methyl and trifluoromethyl groups, or  $R_3$  and  $R_4$  together with the nitrogen atom to which they are attached represent an optionally substituted 5- to 7-membered heterocyclic ring which may contain a second heteroatom selected from  $O$ ,  $S$  and  $N$ , or radical of formula  $-NH(CH_2)_4CH(NH_2)COOH$  or  $-NH-CH(COOH)-CH_2SH$ , with the provisos that if  $R'''$  and  $R''''$  are not both hydrogen, then  $R''$  is methyl or *p*-chlorophenyl, and that if  $Y'$  is hydroxy or alkoxy,  $R''$  is hydrogen or  $C_{1-3}$  alkyl and one of  $R''$  and  $R'$  is hydrogen, the other of  $R''$  and  $R'$  is methyl or ethyl.

2. A compound according to Claim 1, in which each of  $R''$  and  $R'$  is a hydrogen atom or a methyl or phenyl group, each of  $R'''$  and  $R''''$  is a hydrogen or chlorine atom or a methyl, trifluoromethyl or methoxy group,  $R''$  is a straight- or branched-chain  $C_{1-4}$  alkoxy group or a hydroxyl, amino, monoalkylamino, di( $C_{1-3}$  alkyl)amino, piperidino, morpholino, azepino, pyrrolidino, piperazino, *N'*-*p*-chlorophenylpiperazino, aminoalkoxy, mono- or dialkylaminoalkoxy, piperidino alkoxy, morpholinoalkoxy, azepinoalkoxy, piperazinoalkoxy, aryloxy, *p*-chlorophenoxy cyclohexyloxy,  $\Delta^1$ -cyclohexenyloxy, or  $NHCH_2CH_2NR_3R_4$  group;  $Y'$  is a hydroxyl,  $C_{1-4}$  alkoxy,  $NR_3R_4$ ,  $NHCH_2CH_2NR_3R_4$ ,  $O-C_{1-4}$  alkylene- $NR_3R_4$  or cycloalkylamino group or an aryl-amino group optionally containing one or more nuclear substituents selected from chlorine atoms and methyl and trifluoromethyl groups;  $X'$  represents  $O$ , and either each of  $R_3$  and  $R_4$  is a hydrogen atom or a  $C_{1-3}$  alkyl group, or  $R_3$  and  $R_4$ , together with the nitrogen atom to which they are attached, represent an optionally substituted 5- to 7-membered heterocyclic ring, which may contain a second heteroatom selected from  $O$ ,  $S$  and  $N$ , or radical of formula  $NH(CH_2)_4CH(NH_2)COOH$  or  $-NH-CH(COOH)-CH_2SH$ .

3. A compound according to Claim 2, in which  $R''$  is a phenoxy group.

4. A compound according to Claim 1, in which each of  $R''$  and  $R'$  is a hydrogen atom or a methyl or phenyl group, each of  $R'''$  and  $R''''$  is a hydrogen or chlorine atom or a methyl, trifluoromethyl or methoxy group,  $R''$  is a hydrogen atom, a straight- or branched-chain  $C_{1-3}$  alkyl group, or an aryl, *p*-chlorophenyl, cyclohexyl or  $\Delta^1$ -cyclohexenyl group,  $Y'$  is a hydroxyl,  $C_{1-4}$  alkoxy,  $NR_3R_4$ ,  $NHCH_2CH_2NR_3R_4$ ,  $O-C_{1-4}$  alkylene- $NR_3R_4$  or cycloalkylamino group or an aryl-amino group optionally containing one or more nuclear substituents selected from chlorine atoms and methyl and trifluoromethyl groups,  $R_5$  is a hydrogen atom or a  $C_{1-3}$  alkyl or  $CH_2CH_2NR_3R_4$  group, and  $R_3$  and  $R_4$  are as defined in Claim 2, with the provisos set forth in Claim 1.

5. A compound according to claim 4, in which  $R''$  is a phenyl group.

6. A compound according to claim 1, in which each of  $R'''$  and  $R''''$  is a fluorine, chlorine or bromine atom.

7. A compound according to Claim 1 or 6, in which  $Y'$  is a  $C_{1-4}$  alkoxy group.

8. A compound according to claim 1, 6 or 7, in which  $R_0$  is a  $C_{1-3}$  alkyl group.
9. A compound according to claim 1, 6, 7 or 8, in which  $NR_3R_4$  is amino, mono- or dialkylamino, morpholino, thiomorpholino, pyrrolidino, piperidino, azepino, piperazino, N-*p*-chlorophenyl-piperazino, N-methylpiperazino, 4-methylpiperidino, anilino, 2,3-dimethylanilino, *p*-chloroanilino, O-trifluoromethylanilino, *p*-trifluoromethylanilino, cyclohexylamino, cyclopentylamino or N-methylanilino.
10. N-(*p*-propionyl-phenoxyacetyl)-morpholine.
11. N-(*p*-benzoyl-phenoxyacetyl)-piperidine.
12. N-(*p*-propionhydroximoyl-phenoxyacetyl)-piperidine.
13. Isopropyl *p*-(4-chlorobenzoyl)-phenoxy-isobutyrate.
14. *p*-(4-chlorobenzoyl)-phenoxy-isobutyric acid.
15. N-(*p*-carboxyphenoxy-acetyl)-piperidine.
16. Ethyl *p*-piperidinocarbonyl-phenoxy-acetate.
17. N-(*p*-ethoxycarbonyl-phenoxy-acetyl)-piperidine.
18. An acid addition salt of a compound according to any one of claims 1—9.
19. A compound according to claim 1 or 18 substantially as hereinbefore described.
20. A therapeutical composition comprising a pharmaceutically effective amount of at least one compound according to any one of claims 1, 6—9, 18 and 19.
21. A therapeutical composition comprising a pharmaceutically effective amount of at least one compound according to any one of claims 2, 3 and 15—17.
22. A therapeutical composition comprising a pharmaceutically effective amount of at least one compound according to any one of claims 4, 5 and 10—14.

For the Applicants,
